**Abstract.** Sn<sub>1-2x</sub>Al<sub>x</sub>Zn<sub>x</sub>O<sub>2</sub> film has been developed using sol-gel dip coating technique. The materials SnCl<sub>2</sub>·2H<sub>2</sub>O, AlCl<sub>3</sub> and ZnCl<sub>2</sub> dissolved in water and ethanol with 5:95 volume ratio. Variations dopant concentration  $x = 0.000, 0.005, 0.0025, \text{ and } 0.050$ . The film was grown with sol concentration 0.4 M, the withdrawal speed of 12 cm/min and sintering at 600 °C for 30 minutes. The characteristics Sn<sub>1-2x</sub>Al<sub>x</sub>Zn<sub>x</sub>O<sub>2</sub> films with various doping concentration phase were characterized by XRD. The morphological characteristics and the composition of the constituent elements of the film were characterized by SEM-EDX. The characteristics of the shape, structure, and size of the particles were characterized by TEM. The XRD results show that all films have a tetragonal SnO<sub>2</sub> rutile phase without any secondary phase with an average particle size in the range 5.14 – 2.09 nm. The SEM results show that the film grown has a smooth morphology with a striped texture ( $x = 0.00$ ), and there is a crack ( $x = 0.050$ ). The EDX results show that the composition and distribution of the constituent elements of the film are uniformly distributed. TEM results show that the particle films has tetragonal rutile structure, orthorhombic and amorphous with a spherical shape.

**Keywords:** Tin oxide, Zinc doping, Al doping, Sol-Gel, Dip Coating

### 1. Introduction

The tin oxide (SnO<sub>2</sub>) is one n-type transparent semiconductor material with a wide energy band gap (~ 3.6 eV), combines high optical transparency and low resistivity that makes this material applied to solar cells, Liquid Crystal Display and other optoelectronic devices. In addition, SnO<sub>2</sub> is very sensitive to the presence of surrounding gas which makes it is applied as gas sensors [1]. Due to its nature and application, the study of SnO<sub>2</sub> engineering is very intensive. The preparation and growth of SnO<sub>2</sub> film can be done with various techniques such as Chemical Vapor Deposition (CVD) [2], DC and RF Sputtering [3], Pulsed Laser Deposition [4], Chemical Bath Deposition [5], and Sol-Gel Spray Pyrolysis [6], Sol-Gel Spin Coating [7], and Sol-Gel Dip Coating [8]. Of all these methods, Sol-Gel Dip Coating is a very good technique, because it is the simplest one that can grow the film on various forms of the substrate, ease in controlling particle growth and doping, and economical addition.

The characteristics of SnO<sub>2</sub> films are known to be enhanced by the addition of doping. Dopants generally have larger or smaller valence electrons with Sn<sup>+</sup>, and have a similar ionic radius. Dopants may be of a single element such as Sb, F, Zn, Al, Mn or double-shaped elements such as Sb-F, Zn-Co, and others that depend on the application of SnO<sub>2</sub> itself. The SnO<sub>2</sub> films doped with Zn<sup>2+</sup> and Al<sup>3+</sup> ions are known to affect SnO<sub>2</sub> properties themselves, including stabilizing SnO<sub>2</sub> particles and changing energy band gaps, increasing optical transmittance and electrical conductivity, altering structural, increasing responsiveness, selectivity and stability in sensor gas. However, it is not yet known how the effect of these two dopants

dear Dr. Aris Doyan,

Thank you for uploading paper entitled CHARACTERIZATION OF SNO<sub>2</sub> FILMS WITH Al-Zn DOPING USING SOL-GEL DIP COATING TECHNIQUE to The International Conference on Theoretical and Applied Physics (ICTAP) .

Your submission will undergo the NORMAL REVIEW PROCESS of the ICTAP

You can see all your submissions and modify your paper by login to our system at <https://conference.fisika.or.id/>.

Once again, thank you very much for your submission to the ICTAP

For more information please contact us at email:ictap@fisika.or.id

.

Regards,

The conference chairs

Dear Dr. Aris Doyan,

Your paper #7-181 entitled "CHARACTERIZATION OF SNO<sub>2</sub> FILMS WITH Al-Zn DOPING USING SOL-GEL DIP COATING TECHNIQUE " has been subjected to a review process by our reviewers who are experts in the related fields. Based on the reviewers recommendations, I am delighted to inform you that your manuscript has been ACCEPTED WITH MINOR REVISIONS for our conference.

The Editors Comment is inserted below, and you have to login to <https://conference.fisika.or.id/> for detailed information such as reviewers comment/recomendation.

Thank you very much for submitting your article to the ICTAP. I look forward to receiving the revised version of your manuscript. **Authors must resubmit the revised full paper by November 7, 2017.** For more information please contact us at email:ictap@fisika.or.id.

--

Kind regards,

The Conference Chairs
