Dear authors,

We have reached a decision regarding your submission to Molekul, "Molecular Docking of Xanthone Derivatives as therapeutic agent for covid19", please revise according to the suggestion.

Our decision is: Revisions Required

1. Attached is a reviewed manuscript from reviewer#1.

2. Reviewer#2 comments :

- The author should mention the type of protein used in this research in the abstract, i.e. protease, RdRp, etc.
- Please make consistent writing of amino acid residues.
- Make some corrections about what is covid-19 stands for, it should be "coronavirus disease 2019".
- The authors did not mention what "CoV" stands for before using this term

as "Interacting residues"

- Please separate the docked conformation figures between the two targeted proteins. Do not combine in Figure 1.
- The authors have not mentioned the redocking result, including the interacting residues, binding distance and binding energy between the proteins and native ligands. Please include this result as a comparison. Also, the docking result using therapeutic drugs such as remdesivir was strongly suggested.
- The authors should compare their results to the correlated recent studies which used similar methods.

Thank you.
