Reviewer B:

This manuscript studied on arthropod dynamic diversity in the rice field ecosystem in Central Lombok during the rainy season. This paper can be published with revisions.

Many Latin names of species were written incorrectly. Some of them need justification.

Please add Supplementary Table 1.

Please check the references, some of the literatures were not cited.

I put my comments and suggestions in the text.

Recommendation: Revisions Required

Thank you,

Regards,

Ahmad Dwi Setyawan

Reviewer A:

Dear Editor,

Please find attached is the reviews and suggested edits for the manuscript "Arthropod dynamic diversity in the rice field ecosystem in Central Lombok".

This paper is written in very good English, so I enjoyed the reads. I also appreciate the extensive fieldwork conducted with a long period of data collection. While the findings of this study can enrich the existing knowledge in the field of agroecosystem entomology especially in the tropics, there are several things to clarify and improve the paper (as detailed in the attached document). In particular, things that became my concerns are:

1. In the Intro: There is a bunch of studies on arthropods in rice field ecosystems in indonesia. Even in the Biodiversitas Journal we can find several of them (e.g. Prabawati et al, 2019; Karenina et al, 2019; Herlinda et al 2020; etc). So, in the Intro I would suggest to review and elaborate those studies in one paragraph. Then, in a subsequent paragraph the author(s) can highlight the uniqueness/importance of the study. For example, the study can enrich the existing knowledge on agroecosystem entomology in tropics, particularly in the context of study area (i.e. Lombok Island) which might differ with the previous studies.

2. In the Methods: Please add map of study location (and inset map of Indonesia) as not all readers (e.g. non-Indonesians) are familiar with the region.

3. In the Results and Discussion: The parts that explaining Figures 1 and 2 are confusing since there are many inconsistencies between what presented in the figures, the figure captions, and in the text. For example, the caption of Figure 1 says the composition of species while the figure itself presenting ecological functions. Also, in the text said that there is 5 species and 3 families of Odonata, while Figure 2 suggests that there is only one species and family from this group. Please check again the consistency between the figure, figure caption and what explained in the text.

4. Where is the Supplementary Table 1? I can not find it in the document. Instead of put it as Supp. table , I would suggest to add the table as an appendix.

5. Figure 5: It is not directly clear what the figure tells about. I suggest to describe what pictorial role is about and how you did the analysis. Also, it is not clear what the numbers in the triangle refer to? Please add information/note about those numbers.

Best regards,

Reviewer
